

Spring Tree Care Checklist for Reno, NV Homeowners

Inspect for Winter Damage

Check for cracked limbs, leaning trunks, and exposed roots. Schedule a professional inspection if needed.

Prune for Health & Shape

Remove dead or risky branches. Promote healthy growth and improve sunlight penetration.

Mulch the Right Way

Apply 2-4 inches of organic mulch around the base (donut-style). Keeps roots cool and moist.

Deep Water Early

Water slowly and deeply at the drip line. Avoid shallow daily watering.

Fertilize if Needed

Only fertilize after a soil test. Over-fertilizing can harm tree health.

Watch for Pests & Disease

Look for spotted leaves, oozing sap, or changes in foliage. Early detection is key.

Plant New Trees

Spring is ideal! Choose drought-tolerant and native species for Reno's climate.
